

Title: Organic dental eluates in saliva

Responsible scientist: Hilde Molvig Kopperud

Start: 2006

Collaborators: University of Bergen, Adverse Reaction Unit (Bergen)

Summary:

Organic eluates in human saliva collected from patients with polymer based dental filling materials will be analyzed. Collection of saliva will be done directly before, after, 24 h, and 1 week after treatment with one (first) polymer based dental filling material. Analysis will be done by gas and/or liquid chromatography combined with mass spectrometry.
